Ravensdown

ANIMAL HEALTH

Copper Sulphate

Contains 98% Copper Sulphate Pentahydrate
($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$)

A copper supplement for cattle and deer.

Applied by drenching, addition to drinking water, addition to supplementary feed
or blended with fertiliser.

FOR ANIMAL TREATMENT ONLY

Directions for Use

1. Animal supplementation

Cattle: While dose rates for dairy cows vary depending on the individual situation, as a general rule cows should receive up to 1–5 grams of copper sulphate per day.

Deer: Please consult your veterinarian for dose rates for your deer.

2. Fertiliser application rates

While application rates depend on the individual farm situation and should be formulated in conjunction with other factors, as a general rule, the following apply:

Capital rate: 5–10 kg copper sulphate/ha initially (Deer: 12 kg/ha copper sulphate)

Maintenance rate: 5 kg copper sulphate/ha every 4–5 years

For more information on supplementation rates please consult your veterinarian, nutritionist or fertiliser advisor. **Do not exceed recommended rates.**

Contents: 25kg net when packed

Close bag after use. Store in a clean dry covered facility.
