Prices valid 27/07/2026

All prices per tonne excluding GST, store and handling charges.
Store and Handling and Lime include FAF allowance

Product Compatibility Chart

[illegible]

- 1: Potential ammonia gas release
- 2: Change is critical relative humidity - becomes very hygroscopic and rapidly absorbs moisture.
- 3: Change in critical relative humidity - will start to absorb moisture. Advise prompt spread.
- 4: Consider the moisture and free acid content of the SSP.
- 5: Formation of very sticky urea phosphate.
- 6: Sulphur is combustible and can react with nitrates e.g. AN
- 7: Consider the moisture content of the SSP. Not to be bagged.
- 8: N-Protect coating will degrade over time.
- 9: Risk of formation of gypsum.
- 10: Consider the change in Relative humidity when blending - recommend good storage or prompt spread.
- 11: Blend may heat - consider implication on packaging - could compromise 1/2 or 1 mt bag.
- 12: Blend may have reversion - if product left to sit product set up and become hard.
- 13: Keep dry before and after blending.
- 14: Can be mixed as part of a Flexi-N SSP blend.

Key

Meets Fertmark quality assurance standards.

Contains a blend of products that are all Fertmark registered.

Contains a blend of some products that are Fertmark registered.

Available in bulk.

Available in bags.

20kg bags.

Nitrogen products mixed with super-based products have the propensity to become lumpy even in relatively short periods of time. Applications should take place promptly. Segregation may occur when mixed with product with differences of particle size. This should be considered by the applicator when determining the appropriate bout width for spreading product blends of this nature and Ravensdown recommends the equipment and the operation thereof should at least meet the Spreadmark™ minimum performance.

Products eligible for a rebate.

Nitrophoska is a registered trademark of Eurochem Agro GmbH

Animal welfare cautions on fertiliser use

Fluorosis: Phosphate fertilisers contain fluoride. Avoid grazing topdressed pasture for 21 days after topdressing or until 25mm of rain has fallen, to minimise any risk of stock deaths due to fluoride toxicity.

Potassium and hypomagnesaemia: Applying potassium to pasture in late winter/spring, particularly around lambing or calving time, can contribute to grass tetany (hypomagnesaemia) in pregnant and lactating stock. To avoid this risk, do not apply potassium during this period.

Lime and hypocalcaemia: Applying lime to pasture in late autumn/winter, particularly in the last three months of pregnancy can contribute to milk fever (hypocalcaemia) in lactating stock. To avoid this risk, do not apply lime during this period.

Fluoride and cadmium levels: All Ravensdown products contain less than 270g fluoride and 280mg cadmium per kg phosphorus.

Terms and conditions
